Biography

Ronan Burke is the co-founder of Inscribe, the agentic document review platform trusted by leading law firms, unions, and fintechs. He has spent a decade at the front lines of document fraud — first building the early document reasoning systems designed

His focus is the intersection of generative AI and financial crime. Generative AI has changed the economics of fraud: a convincing pay stub takes seconds to produce, editable bank statement templates sell for under \$10, and the volume of fraudulent documents reaching financial institutions has grown to roughly one in sixteen. Ronan's view is that the fraud industry moved first, and most defenses haven't caught up. Rules-based systems and static classifiers were built for a world where fraud was infrequent. They're poorly matched to attacks that are constant, cheap, and fast-iterating.

The answer he keeps coming back to is fraud reasoning: AI that plans, investigates, and explains its conclusions rather than running a fixed checklist. Inscribe's AI Agents reflect that philosophy: they cross-reference metadata, validate employers, flag forensic anomalies, and produce audit-ready explanations, reducing document review from 30 minutes to under 90 seconds while catching fraud that detection alone misses.

Ronan writes for Forbes and ACFE on document fraud, deepfakes, and responsible AI in financial services, and hosts Inscribe's monthly Q&A. In a recent Question, where he interviewed fintech and AI leaders across banking, he discussed how AI is changing fraud. He has spoken at Lend360, Fintech Europe, and ACU Business Lending Roundtable. He has also been featured in TechCrunch, Entrepreneur, VentureBeat, and The Irish Times. He is a Technology Council Member and a "30 Under 30 Europe" honoree. He worked on Electronic Engineering at Intel in Dublin and later completed a Combinator

“We're entering an era where it's no longer a question of whether a document looks real — but whether it can prove it's real.”

🔊 Episode 28

Is AI fraud detection for lenders working? | Karan Gandhi, Best Egg

In this episode, Best Egg's Karan Gandhi and Inscribe CEO Ronan Burke discuss why fraudsters are increasingly blending in rather than standing out, why document review has become forensic work, and what it will take to trust an AI agent to act on a customer's behalf.

🔊 Episode 27

Is AI-generated document fraud increasing?

In this episode, Ronan Burke sits down with Inscribe Risk Operations Analyst Jessica Lara to discuss how AI-generated document fraud is evolving, what she's seeing across thousands of flagged documents, and why AI-edited fraud may be the industry's next big challenge.

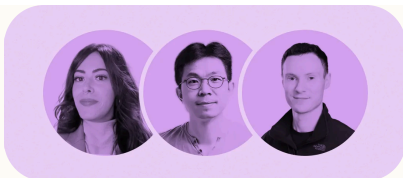

🔊 Episode 22

Why don't more fraudsters go to jail?

A Las Vegas fraud detective and the team at Inscribe explore the gap between catching fraud and prosecuting it — and why prevention is the only answer that actually works.

🔊 Episode 21

Will every bank become a fintech? (Featuring TikTok)

TikTok's Head of Payment Risk and Discover's former fraud oversight leader explore how digital platforms and banks now face the same fraud threats — and why traditional banks are rapidly becoming fintechs.

🔊 Episode 20

What fraud trends are defining 2026? (Featuring Alloy)

Alloy President and co-founder Laura Spiekerman joins Inscribe CEO Ronan Burke to discuss AI-driven fraud volume, post-origination risk, and how fraud teams are adapting across the full customer lifecycle.

🔊 Episode 19

How do you evolve your fraud strategy in the AI age? (Featuring Coast)

A podcast about adapting to AI fraud tactics, evolving signals, and human-in-the-loop AI for prevention.

🔊 Episode 18

How are lenders catching deepfake documents? (Featuring Rapid Finance)

A podcast about how Rapid Finance is adapting to the rise of AI-generated document fraud and redesigning their underwriting workflow to stay ahead.

🔊 Episode 16

Are we ready for the AI fraud crisis?

A conversation about Sam Altman's comments to the Federal Reserve, why document fraud is so hard to detect, and how agentic systems promise a new era of fraud prevention.

🔊 Episode 12

AI generated documents, should we be concerned?

A podcast about fake receipts, autoregressive image models, and just how much of a threat AI-generated documents are.
